SUMMARY

Final-year Software Engineering student at Afeka, specializing in Software & Information Technologies. Build and deploy full-stack systems using C#, ASP.NET Core, React, TypeScript and SQL. Practical experience delivering REST APIs, authentication, database-backed applications and production web solutions. Seeking software engineering student, backend or full-stack development roles.

EDUCATION

Afeka Academic College of Engineering | B.Sc. Software Engineering | 2023–Present

Final year (degree in progress) | Specialization: Software & Information Technologies

SELECTED ENGINEERING PROJECTS & EXPERIENCE

UniPilot | AI-Assisted Academic Project Workspace | 2026

C#, ASP.NET Core (.NET 10), React, TypeScript, PostgreSQL, EF Core, Docker, Google OAuth

- Engineered a full-stack workspace that processes uploaded PDFs into structured requirements and supports project tasks, collaboration and role-based access.
- Implemented REST APIs, database persistence and authentication/authorization flows; deployed the frontend to Vercel, .NET API to Render and PostgreSQL to Supabase.

Live: unipilot-kappa.vercel.app | Code: github.com/JolianHabib/unipilot

Go.Webly | Co-Founder, Web Application Development | 2026–Present

TypeScript, React, Cloudflare Workers, D1, R2, REST APIs, production deployment

- Co-founded a client-focused web development initiative, translating business requirements into deployed websites and custom booking workflows.
- Delivered a studio booking application with appointment scheduling, admin availability controls, customer records and integrated business processes.

Deployed client project: nerminstudio.jolian-habib.com

Afeka Trails | AI-Assisted Trip Planning Application | 2026

Next.js, React, Express, MongoDB, JWT, Leaflet, GraphHopper, OpenWeatherMap

- Developed a trip-planning platform with AI-generated suggestions, interactive maps, route and weather integrations, and persisted trip history.
