SUMMARY

Software Engineering student (4 semesters remaining) with advanced English and strong OOP foundations. Built production-style academic projects applying **Design Patterns**, **SOLID**, **Data Structures & Algorithms**, and **SQL/PostgreSQL persistence**. Fast learner with a problem-solving mindset, clear communication, and high ownership—ready to contribute as a Software Engineering Intern at Microsoft.

TECHNICAL SKILLS

Java · Object-Oriented Programming (OOP) · Design Patterns · **SOLID** · Data Structures & Algorithms · SQL · **PostgreSQL** · **JDBC** · UML / Class Diagrams · Git (basic) · Operating Systems .

PROJECTS

Exam Question Management System — OOP Architecture + Database Integration

Java, OOP, PostgreSQL, JDBC, UML

- Designed an object-oriented model (Subject, QuestionPool, AnswerPool) to create and manage exam questions efficiently.
- Implemented persistent storage via PostgreSQL (JDBC), ensuring data reliability and scalability.
- Applied encapsulation, inheritance, and SOLID principles for clean, testable architecture.
- Produced UML class diagrams and clear module boundaries to support future feature expansion.

Shift Scheduling System — Design Patterns & SOLID Implementation

Java, OOP, Design Patterns, SOLID, UML

- Developed a scheduling platform to manage work shifts, integrating dynamic allocation and user-friendly management logic.
- Applied key Design Patterns (Singleton, Observer, Command, Memento) to support flexibility and modularity.
- Enforced SOLID principles to enhance code maintainability and testability.
- Modeled the system with UML diagrams to visualize relationships and streamline feature design.

EDUCATION

- B.Sc. in Software Engineering — AFEKA The Academic College of Engineering in Tel Aviv
- Specialization: **Software & Information Technologies**
- Remaining Semesters: 4
- Relevant coursework: Intro to CS, OOP, Data Structures, Algorithms, Operating Systems, Databases, HCI, Parallel & Distributed Computing

ADDITIONAL

- Availability: Student schedule aligned with 3 on-site days/week (Herzliya).
- Interests: Building maintainable, extensible systems; learning at scale within a world-class engineering culture.
